Headshot Michael Howard Smith

Memory is a tricky thing. Sometimes it's dead on, sometimes it gets things a little backwards, but sometimes it defies retrieval, though usually not for long. That's because the human brain can survive most anything nature throws its way. Yet it is the brain that is also at the root of the many trials it may be forced to confront; the ability to imagine its own demise being the primary weapon. Attempt to switch it off with man-made chemicals or blunt force trauma; disturb its delicate balance with lies and substances alien to its nature and . . . it may change forever, even die . . . unless its original programming simply refuses to be erased.
